HEDWIN INTRODUCES ONE GALLON BOTTLE

April 1, 1995 - Hedwin Corporation, a manufacturer of plastic containers and liner products, has announced the introduction of a one gallon round HDPE bottle. The bottle, which is designed and manufactured to meet UN packaging specifications, is available in bulk quantities, or set up in an optional four-pack shipper.

"Quality and product reliability are fundamental to Customer satisfaction", says David E. Rubley, Hedwin's President. "Our survey of the marketplace lead us to believe the need for a reliable one gallon bottle package clearly exists."

Rubley went on to state that the one gallon bottle's introduction is consistent with Hedwin's desire to expand its Total Quality approach. "Customers who've relied on Hedwin quality for their 2.5 gallon or five gallon requirements can now count on Hedwin for a quality one gallon bottle package as well."

Design features of the round bottle include an enlarged four-finger handle grip, anti-glug pouring, and NBO neck finish. Bulk bottle shipments come packed 48 per shipper carton, while the four-pack set up meets UN 4G Specification. Decoration options include sleeved bottles and printed cartons.

Hedwin, recommended for its ISO 9001 certification in March, supports Customer packaging compliance with its own Technical Services Department and DOT approved third party test lab. "There are many misconceptions and misunderstandings about the shipment of regulated products," explains Sue Nauman, Hedwin's Technical Service Supervisor. "Our Customers can rely on Hedwin for a thorough review of their packaging requirements, and the appropriate Hedwin package to ship both regulated and non-regulated products."
