

# Liner Group

**E**nvironmental Concerns, Stringent Government Regulations, Cost Containment... These are just some of the pressures that are mounting on Industry in the 1990's. The Hedwin Liner Group meets these issues head-on. Hedwin Liners drastically reduce the disposal of pails and drums. The worries connected with chemicals used to clean contaminated pails and drums, and their subsequent disposal, are eliminated with the use of Hedwin Liners. Costs associated with labor for the cleaning of contaminated units are eliminated with the use of liners.

**WINLINER® Film Liner** Hedwin's round bottom, low density polyethylene film liner manufactured to fit standard 5 gallon pail and 55 gallon drum sizes. Winliner® is available in two sizes: Cylindrical Tie-Top and Disc-Top.

The Winliner® design minimizes wrinkling, eliminates folds, and permits greater product recovery. Winliner®, used for wet and dry products, liquids and pastes, makes lightweight containers a reality. Film liners lower shipping costs, reduce package costs, eliminate drum cleaning and keep drums in circulation.

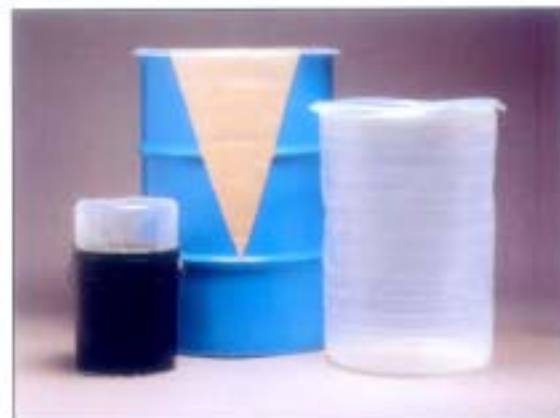

High density, custom size round bottom, or flat-seal Winliner® available for unique applications. An ANTI-STAT\* Winliner® is also available.

**HEDLINER® Drum Liner** Hedwin's flexible, low density polyethylene composite insert for 5 gallon to 55 gallon pails and drums. Over the years, the Hedliner® has evolved from a component of shipping containers to added popularity as an in-plant mixing and product containment vessel.

Cylindrical in design, Hedliner® fits the contour of the drum and eliminates concerns where mixing paddles are used. Hedliner® design helps economize: Full product recovery and drums kept in circulation while eliminating labor costs.

Hedliner® comes in a broad range of styles and capacities to fit the wide variety of Customer requirements. The versatile Hedliner® is ideal for virtually all wet and dry materials.

Hedliner® Drum Liners are available with an ANTI-STAT\* option.

\*Hedwin liners can be produced with anti-static or static-dissipative properties to meet specialized applications.

The **PAYLINER® Pail Liner** is a full open head, high density polyethylene insert for plastic and metal pails. Readily available in standard sizes of 2, 3 1/2, 5, and 6 gallons, the Payliner®, when used for in-plant applications, reduces cost:

- In-plant cleanup cost reduction.
- Disposal cost reductions.
- Fewer new pail purchases.

Environmentally, the Payliner® offers:

- Recyclable high density polyethylene construction.
- No chemicals needed to clean contaminated pails - no chemical disposal worries.
- Disposable and easily crushable, Payliner® contains less than 1/10th the material found in OH pails! Reduces waste.

In addition to Payliner® use for in-plant storage, mixing, and production line changeovers of a wide array of products, the durable Payliner®, as a component of a shipping container, delivers maximum protection against corrosion and product contamination. Payliner® eliminates the need for costly interior linings, and makes used pails easy to reuse or dispose of.

Payliner® is available with an ANTI-STAT\* option.

**TOPLINER® Pail Divider** is a high density polyethylene insert for 5 and 6 gallon steel pails allowing shipment of two components in one container.

Topliner® is available in two versions: Cradle and Tray. The shape of the cradle Topliner® provides a support for a one gallon can on its side, or a one-half gallon can in an upright position. The tray style is a flat bottom plastic pan supported by the top rim of a steel pail in the same manner as the cradle.

**DRUM PROTECTOR LID** Rugged, multiple use polyethylene lid provides drum head protection against the elements. Styles for both FOH and TH Drums can be snapped on or off in seconds. Drum Protector Lids are also ideal as a temporary cover for partially filled drums; Helps avoid finished product or product ingredient contamination.
